

BIO: SCOTT DOMBROSKY

Scott Dombrosky comes to ACE, LLC SOLAR straight out of college. He attended the Pennsylvania State University where he focused his studies in Energy Engineering. He is our Research & Data Engineer. His primary goal at ACE, LLC SOLAR is to keep our customers informed about how their solar systems are working after the system has been installed and commissioned. He does this by traveling to each site every month inspecting the physical appearance of the system and collecting production data. He also looks for irregularities in the data and corrects any issue while on site. Once back from his trip, he takes the data and creates detailed graphs and charts to be utilized in system reports he creates and sends to the customers each month.

In preparation for this position, Scott spent 8 months working in the field with the crew; hands on installing the solar systems and learning from the crew how best to trouble shoot any issues that come up.

Scott believes solar power is one of the future producers of energy. It is more environmentally friendly and cost effective than modern energy production sources.

Scott Enjoys reading, watching scary movies and taking his dog on hikes.
