

## BIO: STANLEY K. PIERCHOSKI

Stan comes to ACE, LLC. SOLAR with 20 years as a Nuclear Engineer in the commercial nuclear power generation business. He worked at many different nuclear power plants generating electricity for various utilities throughout the country. Just prior to joining ACE, LLC. Solar, Stan was a practicing attorney with the Pierchoski Law Firm in Pulaski, Tennessee, where he practiced a wide variety of civil and criminal law for twelve years. His education is as follows:

Nashville School of Law, Nashville, TN, Doctor of Jurisprudence 2002

University of California, Berkeley, CA, Master of Engineering, Nuclear Engineering 1984

University of Pittsburgh, Pittsburgh, PA, Bachelor of Science, Chemical Engineering 1979

University of Pittsburgh, Pittsburgh, PA, Bachelor of Science, Chemistry 1977

After spending many years generating electricity for one utility or the other, in the 1990's Stan set out to design and build a house that could operate completely self-sufficient and independent of the utility power grid. His 5,000 square foot home generates all of its own electricity, has its own potable water system, sewage system, heating and cooling, solid waste disposal and fire suppression system.

Stan commented, "I am very excited about the renewable energy field and believe it is the way of the future. Today's technology has cleared the way to make such independent systems available on an industrial scale and ACE, LLC. SOLAR is right there on the cutting edge."

Stan and his wife Tammie have been married for 27 years and together they have three children. Their daughter is an actress in New York. One son is a Mechanical Engineer at Tennessee Tech, and their other son is a student at Middle Tennessee State University. Both Stan and Tammie are active in the local theater community. He and Tammie own the Starr Theater and produce several productions throughout the year.

ACE, LLC. SOLAR proudly welcomes Stan to our team.
